

SINUS INFECTION VS COLD QUIZ

SINUS INFECTION VS. COLD: TAKE OUR QUIZ TO UNCOVER THE TRUTH

SINUS INFECTION VS COLD QUIZ – ARE YOU BATTLING A PERSISTENT SNIFFLE, A NAGGING COUGH, OR SOMETHING MORE SERIOUS LURKING BEHIND YOUR FACIAL PRESSURE? UNDERSTANDING THE SUBTLE YET CRUCIAL DIFFERENCES BETWEEN A COMMON COLD AND A SINUS INFECTION IS KEY TO GETTING THE RIGHT RELIEF AND AVOIDING UNNECESSARY COMPLICATIONS. MANY PEOPLE STRUGGLE TO DIFFERENTIATE THESE TWO CONDITIONS, LEADING TO DELAYED OR INCORRECT TREATMENT. THIS COMPREHENSIVE GUIDE AND INTERACTIVE QUIZ ARE DESIGNED TO EMPOWER YOU WITH THE KNOWLEDGE TO IDENTIFY YOUR SYMPTOMS ACCURATELY. WE’LL DELVE INTO THE DISTINCT CHARACTERISTICS, COMMON CULPRITS, AND TREATMENT APPROACHES FOR BOTH COLDS AND SINUS INFECTIONS, HELPING YOU NAVIGATE YOUR DISCOMFORT WITH CONFIDENCE. GET READY TO EXPLORE THE NUANCES AND FIND OUT WHAT’S REALLY GOING ON WITH YOUR HEALTH.

FREQUENTLY ASKED QUESTIONS

WHAT IS A COMMON COLD?

A COMMON COLD, ALSO KNOWN AS AN UPPER RESPIRATORY INFECTION (URI), IS A VIRAL INFECTION THAT PRIMARILY AFFECTS YOUR NOSE AND THROAT. IT’S ONE OF THE MOST FREQUENT ILLNESSES AFFECTING HUMANS, WITH MOST ADULTS CATCHING TWO TO THREE COLDS PER YEAR, AND CHILDREN OFTEN EXPERIENCING EVEN MORE. THESE INFECTIONS ARE HIGHLY CONTAGIOUS AND SPREAD THROUGH AIRBORNE DROPLETS WHEN AN INFECTED PERSON COUGHS, SNEEZES, OR TALKS. THEY CAN ALSO SPREAD BY TOUCHING CONTAMINATED SURFACES AND THEN TOUCHING YOUR EYES, NOSE, OR MOUTH. WHILE GENERALLY MILD AND SELF-LIMITING, COLDS CAN CERTAINLY MAKE YOU FEEL MISERABLE FOR A WEEK OR TWO.

THE VIRUSES RESPONSIBLE FOR COLDS ARE NUMEROUS, WITH RHINOVIRUSES BEING THE MOST COMMON CULPRITS. OTHER VIRUSES LIKE CORONAVIRUSES, ADENOVIRUSES, AND RESPIRATORY SYNCYTIAL VIRUS (RSV) CAN ALSO CAUSE COLD-LIKE SYMPTOMS. THE INCUBATION PERIOD FOR A COLD IS TYPICALLY SHORT, USUALLY BETWEEN ONE TO THREE DAYS AFTER EXPOSURE TO THE VIRUS. SYMPTOMS OFTEN APPEAR GRADUALLY, STARTING WITH A SCRATCHY THROAT, FOLLOWED BY A RUNNY NOSE, SNEEZING, AND SOMETIMES A MILD COUGH. IT’S IMPORTANT TO REMEMBER THAT ANTIBIOTICS ARE INEFFECTIVE AGAINST VIRUSES, SO REST, HYDRATION, AND OVER-THE-COUNTER REMEDIES ARE USUALLY THE BEST COURSE OF ACTION FOR A COMMON COLD.

UNDERSTANDING SINUS INFECTIONS

A SINUS INFECTION, MEDICALLY TERMED SINUSITIS, OCCURS WHEN THE SINUS CAVITIES – THE AIR-FILLED SPACES IN YOUR FOREHEAD, CHEEBONES, AND BEHIND YOUR NOSE – BECOME INFLAMED AND INFECTED. THIS INFLAMMATION CAN BE CAUSED BY VIRUSES, BACTERIA, OR EVEN FUNGI. WHILE COLDS ARE THE MOST FREQUENT TRIGGER FOR ACUTE SINUSITIS, OTHER FACTORS LIKE ALLERGIES, NASAL POLYPS, OR A DEVIATED SEPTUM CAN ALSO CONTRIBUTE TO OR WORSEN SINUS INFECTIONS. WHEN YOUR SINUSES BECOME BLOCKED AND INFLAMED, MUCUS CAN GET TRAPPED, CREATING A BREEDING GROUND FOR MICROORGANISMS TO MULTIPLY.

SINUS INFECTIONS CAN BE CLASSIFIED INTO SEVERAL TYPES BASED ON DURATION. ACUTE SINUSITIS TYPICALLY LASTS FOR LESS THAN FOUR WEEKS AND OFTEN DEVELOPS AFTER A COLD. SUBACUTE SINUSITIS LASTS BETWEEN FOUR TO TWELVE WEEKS, WHILE

CHRONIC SINUSITIS PERSISTS FOR TWELVE WEEKS OR LONGER, EVEN WITH TREATMENT. THE SYMPTOMS OF A SINUS INFECTION CAN BE QUITE DISTINCT FROM A COLD, OFTEN INVOLVING MORE SEVERE FACIAL PAIN, PRESSURE, AND THICK NASAL DISCHARGE. RECOGNIZING THESE SIGNS IS CRUCIAL FOR TIMELY AND APPROPRIATE MEDICAL INTERVENTION, AS BACTERIAL SINUS INFECTIONS MAY REQUIRE ANTIBIOTIC TREATMENT.

KEY DIFFERENCES: SINUS INFECTION VS. COLD

THE PRIMARY DISTINCTION BETWEEN A SINUS INFECTION AND A COMMON COLD LIES IN THE LOCATION AND SEVERITY OF THE INFLAMMATION AND THE UNDERLYING CAUSE. A COLD IS A GENERALIZED VIRAL INFECTION OF THE UPPER RESPIRATORY TRACT, PRIMARILY AFFECTING THE NASAL PASSAGES AND THROAT. IN CONTRAST, A SINUS INFECTION IS A MORE LOCALIZED INFLAMMATION SPECIFICALLY WITHIN THE SINUS CAVITIES. THIS DIFFERENCE OFTEN TRANSLATES INTO SYMPTOM INTENSITY AND DURATION. WHILE A COLD MIGHT LEAVE YOU FEELING GENERALLY UNWELL WITH MILD CONGESTION AND SNEEZING, A SINUS INFECTION CAN BRING ABOUT MORE INTENSE AND LOCALIZED DISCOMFORT.

ANOTHER SIGNIFICANT DIFFERENTIATOR IS THE POTENTIAL FOR BACTERIAL INVOLVEMENT. COLDS ARE ALMOST EXCLUSIVELY VIRAL. SINUS INFECTIONS, HOWEVER, CAN DEVELOP INTO BACTERIAL INFECTIONS, ESPECIALLY IF THEY ARISE AS A COMPLICATION OF A VIRAL URI. THIS IS A CRITICAL POINT BECAUSE BACTERIAL INFECTIONS OFTEN REQUIRE DIFFERENT TREATMENT STRATEGIES, SUCH AS ANTIBIOTICS, WHICH ARE USELESS AGAINST VIRUSES. IDENTIFYING WHETHER YOUR SYMPTOMS ARE LINGERING BEYOND THE TYPICAL COLD DURATION OR ARE ACCOMPANIED BY SPECIFIC SIGNS OF SINUS PRESSURE CAN HELP YOU DETERMINE IF YOU'VE PROGRESSED FROM A SIMPLE COLD TO A MORE COMPLEX SINUS INFECTION.

DURATION OF SYMPTOMS

ONE OF THE MOST TELLING SIGNS TO DIFFERENTIATE BETWEEN A COLD AND A SINUS INFECTION IS THE DURATION OF YOUR SYMPTOMS. COMMON COLDS TYPICALLY RUN THEIR COURSE WITHIN 7 TO 10 DAYS. YOU MIGHT FEEL ROUGH DURING THIS PERIOD, BUT YOU SHOULD START TO SEE A NOTICEABLE IMPROVEMENT BY THE END OF THE SECOND WEEK. IF YOUR SYMPTOMS, PARTICULARLY NASAL CONGESTION, FACIAL PAIN, AND THICK DISCHARGE, PERSIST FOR LONGER THAN 10 DAYS WITHOUT ANY SIGNS OF IMPROVEMENT, IT'S A STRONG INDICATOR THAT YOU MIGHT BE DEALING WITH A SINUS INFECTION.

SEVERITY OF SYMPTOMS

WHILE BOTH CONDITIONS CAN CAUSE DISCOMFORT, THE SEVERITY OFTEN ESCALATES WITH A SINUS INFECTION. A COLD MIGHT PRESENT WITH GENERAL ACHES, A SORE THROAT, AND A STUFFY OR RUNNY NOSE. SINUS INFECTIONS, HOWEVER, TEND TO MANIFEST WITH MORE INTENSE AND LOCALIZED SYMPTOMS. THIS OFTEN INCLUDES SIGNIFICANT FACIAL PAIN OR PRESSURE, PARTICULARLY AROUND THE EYES, CHEEKS, AND FOREHEAD, WHICH CAN WORSEN WHEN YOU BEND OVER. THE NASAL DISCHARGE IN A SINUS INFECTION IS ALSO TYPICALLY THICKER, OFTEN YELLOW OR GREEN, AND MAY BE ACCOMPANIED BY A REDUCED SENSE OF SMELL OR TASTE.

TYPE OF NASAL DISCHARGE

THE COLOR AND CONSISTENCY OF YOUR NASAL DISCHARGE CAN OFFER CLUES. WITH A COMMON COLD, NASAL DISCHARGE IS OFTEN CLEAR AND WATERY, ESPECIALLY IN THE EARLY STAGES. AS THE COLD PROGRESSES, IT MAY BECOME THICKER AND TURN OPAQUE, BUT IT USUALLY REMAINS WHITE OR YELLOWISH. IN A SINUS INFECTION, PARTICULARLY A BACTERIAL ONE, THE DISCHARGE IS MORE LIKELY TO BE THICK, DISCOLORED (YELLOW OR GREEN), AND POTENTIALLY EVEN TINGED WITH BLOOD. THIS THICK, DISCOLORED MUCUS IS A SIGN THAT YOUR BODY IS FIGHTING OFF AN INFECTION WITHIN THE SINUS CAVITIES.

SYMPTOMS TO WATCH FOR: A DETAILED BREAKDOWN

DISTINGUISHING BETWEEN A COLD AND A SINUS INFECTION BOILS DOWN TO CAREFULLY OBSERVING A CONSTELLATION OF SYMPTOMS. WHILE THERE'S OVERLAP, CERTAIN INDICATORS POINT MORE STRONGLY TOWARDS ONE CONDITION OVER THE OTHER. PAYING ATTENTION TO THE LOCATION AND INTENSITY OF PAIN, THE NATURE OF NASAL DISCHARGE, AND THE OVERALL DURATION OF YOUR ILLNESS CAN BE INCREDIBLY HELPFUL IN SELF-DIAGNOSIS.

FACIAL PAIN AND PRESSURE

THIS IS A HALLMARK SYMPTOM THAT OFTEN DISTINGUISHES A SINUS INFECTION FROM A COLD. WITH A COLD, YOU MIGHT FEEL SOME GENERAL CONGESTION AND PERHAPS A SLIGHT HEADACHE. HOWEVER, A SINUS INFECTION TYPICALLY CAUSES MORE PRONOUNCED AND LOCALIZED FACIAL PAIN AND PRESSURE. THIS DISCOMFORT IS USUALLY FELT IN THE FOREHEAD, CHEEKS, AROUND THE EYES, OR EVEN IN THE UPPER TEETH. THE PRESSURE CAN BE SIGNIFICANT, OFTEN DESCRIBED AS A DULL ACHE OR A THROBBING SENSATION, AND IT TENDS TO WORSEN WHEN YOU BEND FORWARD OR LIE DOWN, AS THIS INCREASES PRESSURE WITHIN THE INFLAMED SINUS CAVITIES.

NASAL CONGESTION AND DISCHARGE

BOTH COLDS AND SINUS INFECTIONS CAUSE NASAL CONGESTION AND DISCHARGE, BUT THE CHARACTERISTICS CAN DIFFER. A COLD OFTEN STARTS WITH A RUNNY NOSE AND SNEEZING, WITH THE DISCHARGE USUALLY CLEAR AND WATERY. AS MENTIONED, IT MAY THICKEN AND TURN OPAQUE. IN A SINUS INFECTION, THE CONGESTION IS OFTEN MORE SEVERE AND PERSISTENT, MAKING IT DIFFICULT TO BREATHE THROUGH YOUR NOSE. THE DISCHARGE IS TYPICALLY THICK, COLORED (YELLOW, GREEN, OR EVEN BROWN), AND MAY HAVE AN UNPLEASANT ODOR. SOMETIMES, YOU MIGHT EXPERIENCE A REDUCED SENSE OF SMELL OR TASTE BECAUSE THE INFLAMMATION IS BLOCKING THE OLFACTORY RECEPTORS.

OTHER COMMON SYMPTOMS

BEYOND THE PRIMARY INDICATORS, BOTH COLDS AND SINUS INFECTIONS CAN PRESENT WITH A RANGE OF OTHER SYMPTOMS. THESE MIGHT INCLUDE A SORE THROAT, COUGH (OFTEN WORSE AT NIGHT), FATIGUE, FEVER (THOUGH TYPICALLY LOW-GRADE WITH A COLD, AND CAN BE HIGHER WITH BACTERIAL SINUSITIS), AND A GENERAL FEELING OF MALAISE. HOWEVER, IF A FEVER IS HIGH AND PERSISTENT, OR IF SYMPTOMS LIKE SEVERE HEADACHE, STIFF NECK, OR VISION CHANGES OCCUR, IT'S CRUCIAL TO SEEK IMMEDIATE MEDICAL ATTENTION, AS THESE COULD SIGNAL A MORE SERIOUS COMPLICATION.

- SORE THROAT
- COUGH
- FATIGUE
- FEVER
- HEADACHE
- DECREASED SENSE OF SMELL OR TASTE

WHEN TO SEEK MEDICAL ADVICE

WHILE MANY COLDS AND MILD SINUS INFECTIONS CAN BE MANAGED AT HOME, THERE ARE SPECIFIC CIRCUMSTANCES WHERE PROFESSIONAL MEDICAL EVALUATION IS ESSENTIAL. SELF-TREATING WITHOUT UNDERSTANDING THE UNDERLYING CAUSE CAN SOMETIMES PROLONG YOUR ILLNESS OR LEAD TO COMPLICATIONS. TRUSTING YOUR BODY'S SIGNALS AND KNOWING WHEN TO CONSULT A HEALTHCARE PROVIDER IS A SIGN OF PROACTIVE HEALTH MANAGEMENT.

PERSISTENT OR WORSENING SYMPTOMS

IF YOUR COLD SYMPTOMS DON'T IMPROVE AFTER 10 DAYS, OR IF THEY INITIALLY IMPROVE AND THEN WORSEN AGAIN, THIS IS A STRONG INDICATOR THAT YOU MIGHT HAVE DEVELOPED A SECONDARY BACTERIAL SINUS INFECTION. SIMILARLY, IF THE FACIAL PAIN OR PRESSURE BECOMES INCREASINGLY SEVERE, OR IF OVER-THE-COUNTER PAIN RELIEVERS ARE NO LONGER EFFECTIVE, IT'S TIME TO SEE A DOCTOR. A HEALTHCARE PROFESSIONAL CAN ACCURATELY DIAGNOSE THE CAUSE OF YOUR PERSISTENT SYMPTOMS AND RECOMMEND THE MOST APPROPRIATE TREATMENT PLAN.

HIGH FEVER OR SEVERE HEADACHE

A MILD FEVER CAN ACCOMPANY BOTH COLDS AND SINUS INFECTIONS, BUT A HIGH FEVER (GENERALLY ABOVE 102°F OR 39°C) WARRANTS MEDICAL ATTENTION. THIS COULD BE A SIGN OF A MORE SEVERE INFECTION OR A COMPLICATION. LIKEWISE, A SEVERE HEADACHE, ESPECIALLY ONE THAT IS ACCOMPANIED BY A STIFF NECK, CONFUSION, OR VISUAL DISTURBANCES, IS A RED FLAG THAT REQUIRES IMMEDIATE MEDICAL EVALUATION. THESE SYMPTOMS COULD INDICATE A MORE SERIOUS CONDITION SUCH AS MENINGITIS OR ENCEPHALITIS, WHICH NEED PROMPT DIAGNOSIS AND TREATMENT.

SIGNS OF SERIOUS COMPLICATIONS

WHILE RARE, SINUS INFECTIONS CAN SOMETIMES LEAD TO SERIOUS COMPLICATIONS, PARTICULARLY IF LEFT UNTREATED. SIGNS THAT SUGGEST A COMPLICATION ARE OCCURRING INCLUDE SWELLING OR REDNESS AROUND ONE OR BOTH EYES, DOUBLE VISION OR OTHER VISION CHANGES, SEVERE PAIN WHEN TRYING TO MOVE YOUR EYES, STIFF NECK, CONFUSION, OR PERSISTENT VOMITING. IF YOU EXPERIENCE ANY OF THESE ALARMING SYMPTOMS, DO NOT DELAY IN SEEKING EMERGENCY MEDICAL CARE. EARLY INTERVENTION IS CRITICAL FOR MANAGING THESE POTENTIALLY DANGEROUS CONDITIONS EFFECTIVELY.

YOUR SINUS INFECTION VS. COLD QUIZ

NOW THAT YOU'RE ARMED WITH KNOWLEDGE, LET'S PUT IT TO THE TEST! ANSWER THE FOLLOWING QUESTIONS HONESTLY TO HELP DETERMINE WHETHER YOU'RE LIKELY DEALING WITH A COMMON COLD OR A SINUS INFECTION. REMEMBER, THIS QUIZ IS FOR INFORMATIONAL PURPOSES AND IS NOT A SUBSTITUTE FOR PROFESSIONAL MEDICAL ADVICE. IF YOU HAVE CONCERNS ABOUT YOUR HEALTH, ALWAYS CONSULT A HEALTHCARE PROVIDER.

1. HOW LONG HAVE YOUR PRIMARY SYMPTOMS (E.G., CONGESTION, RUNNY NOSE, FACIAL PRESSURE) BEEN PRESENT?

- LESS THAN 7 DAYS
- 7 TO 10 DAYS
- MORE THAN 10 DAYS, AND THEY HAVEN'T IMPROVED
- MORE THAN 10 DAYS, AND THEY HAVE WORSENERD

2. WHERE IS YOUR MAIN DISCOMFORT LOCATED?

- GENERAL HEAD CONGESTION, MAYBE A MILD HEADACHE
- SIGNIFICANT PRESSURE OR PAIN IN YOUR FOREHEAD, CHEEKS, OR AROUND YOUR EYES
- PAIN IN YOUR UPPER TEETH
- PAIN THAT RADIATES TO YOUR EARS OR JAW

3. DESCRIBE THE COLOR AND CONSISTENCY OF YOUR NASAL DISCHARGE.

- CLEAR AND WATERY, OR WHITE AND THIN
- THICK AND OPAQUE, WHITE OR YELLOWISH
- THICK, YELLOW OR GREEN, POSSIBLY WITH A FOUL ODOR
- THICK, COLORED DISCHARGE WITH STREAKS OF BLOOD

4. DO YOU EXPERIENCE SIGNIFICANT FACIAL PAIN OR PRESSURE THAT WORSENS WHEN YOU BEND OVER?

- NO, OR ONLY MILD DISCOMFORT
- YES, DEFINITELY
- SOMETIMES, BUT IT'S NOT SEVERE

5. HAVE YOU HAD A FEVER? IF SO, WHAT IS THE APPROXIMATE TEMPERATURE?

- NO FEVER
- LOW-GRADE FEVER (UNDER 101°F / 38.3°C)
- HIGH FEVER (101°F / 38.3°C OR HIGHER)

6. ARE YOUR SYMPTOMS ACCOMPANIED BY SNEEZING AND A SORE THROAT?

- YES, PROMINENTLY
- YES, BUT MILDLY
- NO, OR ONLY RARELY

7. DO YOU HAVE A REDUCED SENSE OF SMELL OR TASTE?

- NO
- YES, SLIGHTLY
- YES, SIGNIFICANTLY

8. HAVE YOU TRIED OVER-THE-COUNTER COLD REMEDIES, AND HAVE THEY PROVIDED RELIEF?

- YES, AND THEY'VE HELPED SIGNIFICANTLY
- YES, BUT ONLY MILD RELIEF

- No, they haven't helped much

Decoding Your Quiz Results

Review your answers to the quiz. While this is a simplified tool, it can offer insights into whether your symptoms align more with a common cold or a sinus infection. Generally, if most of your answers point towards the characteristics of a cold, you are likely experiencing that common ailment. However, if you found yourself selecting answers that indicate persistent symptoms beyond 10 days, significant facial pain, thick colored nasal discharge, and a reduced sense of smell, it strongly suggests a sinus infection.

For example, if you consistently chose options indicating symptoms lasting less than 10 days, mild discomfort, and clear or white discharge, it's probable you have a common cold. These symptoms typically resolve with rest and hydration. On the other hand, frequent selections of answers describing symptoms lasting over 10 days, intense facial pressure, thick yellow or green discharge, and a worsening of pain when bending over are strong indicators of sinusitis. In such cases, consulting a healthcare professional for a definitive diagnosis and appropriate treatment, which may include antibiotics if a bacterial infection is suspected, is highly recommended.

Frequently Asked Questions

Q: Can a cold turn into a sinus infection?

A: Yes, absolutely. A common cold is a viral infection, and the inflammation it causes in the nasal passages can create an environment where bacteria can thrive, leading to a secondary bacterial sinus infection. This is why sinus infection symptoms can sometimes develop after the initial cold symptoms seem to be improving or lingering for too long.

Q: What is the main difference in treatment between a cold and a sinus infection?

A: Colds are viral and are typically treated with rest, fluids, and over-the-counter symptom relievers. Sinus infections can be viral or bacterial. Viral sinusitis is treated similarly to a cold. However, bacterial sinusitis often requires a course of antibiotics prescribed by a doctor. Antihistamines and decongestants might also be used for both, but their effectiveness and necessity can vary.

Q: How long does a sinus infection typically last?

A: Acute sinus infections usually last for less than four weeks. Subacute sinusitis can persist for four to twelve weeks. Chronic sinusitis lasts for twelve weeks or longer, even with treatment. The duration often depends on the cause (viral, bacterial, fungal) and how effectively it is treated.

Q: Are sinus infections contagious like colds?

A: Viral sinus infections can be contagious, spreading similarly to colds through respiratory droplets. However, bacterial sinus infections are not typically contagious in the same way. The focus for bacterial sinusitis is on treating the infection in the affected individual.

Q: CAN ALLERGIES CAUSE SINUS INFECTION SYMPTOMS?

A: YES, ALLERGIES CAN MIMIC THE SYMPTOMS OF A SINUS INFECTION AND CAN ALSO CONTRIBUTE TO DEVELOPING ONE. ALLERGIC RHINITIS CAUSES INFLAMMATION IN THE NASAL PASSAGES AND SINUSES, WHICH CAN LEAD TO CONGESTION AND A BUILDUP OF MUCUS, MAKING IT EASIER FOR INFECTIONS TO TAKE HOLD.

Q: WHAT ARE HOME REMEDIES THAT CAN HELP WITH SINUS INFECTION SYMPTOMS?

A: HOME REMEDIES LIKE USING A SALINE NASAL RINSE OR SPRAY, INHALING STEAM FROM A HOT SHOWER OR A BOWL OF HOT WATER, USING A HUMIDIFIER, AND STAYING WELL-HYDRATED CAN HELP THIN MUCUS AND RELIEVE CONGESTION. WARM COMPRESSES APPLIED TO THE FACE CAN ALSO EASE SINUS PAIN.

Q: WHEN SHOULD I WORRY ABOUT MY SINUS PAIN?

A: YOU SHOULD WORRY ABOUT YOUR SINUS PAIN IF IT IS SEVERE, PERSISTENT, ACCOMPANIED BY A HIGH FEVER, VISION CHANGES, SWELLING AROUND THE EYES, OR A STIFF NECK. THESE SYMPTOMS COULD INDICATE A MORE SERIOUS COMPLICATION THAT REQUIRES IMMEDIATE MEDICAL ATTENTION.

Q: CAN I TAKE ANTIBIOTICS FOR A COMMON COLD?

A: NO, YOU SHOULD NOT TAKE ANTIBIOTICS FOR A COMMON COLD. ANTIBIOTICS ARE ONLY EFFECTIVE AGAINST BACTERIA, AND COLDS ARE CAUSED BY VIRUSES. TAKING ANTIBIOTICS UNNECESSARILY CAN LEAD TO SIDE EFFECTS AND CONTRIBUTE TO ANTIBIOTIC RESISTANCE, MAKING THEM LESS EFFECTIVE FOR FUTURE BACTERIAL INFECTIONS.

Q: IS GREEN MUCUS ALWAYS A SIGN OF A BACTERIAL INFECTION?

A: NOT NECESSARILY. WHILE THICK, GREEN MUCUS CAN BE A SIGN OF A BACTERIAL SINUS INFECTION, IT CAN ALSO OCCUR DURING A VIRAL INFECTION AS YOUR IMMUNE SYSTEM FIGHTS IT OFF. THE COLOR CHANGE IS DUE TO THE PRESENCE OF IMMUNE CELLS. IT'S THE COMBINATION OF SYMPTOMS AND DURATION THAT HELPS DETERMINE IF A BACTERIAL INFECTION IS LIKELY.
